Kynar® PVDF, when high performance matters
Kynar® PVDF is well established in the chemical processing industry for its excellent chemical resistance, mechanical strength, and long-term durability. These same qualities make this resin a great option for use in microfiltration and ultrafiltration membranes. Kynar® PVDF polymers are soluble in a variety of solvents, allowing them to be solvent-cast by the phase inversion process. Membranes made with Kynar® PVDF may be prepared as flat sheets, hollow fibers, and tubular configurations via the TIPS and NIPS processes.

Select Kynar® PVDF grades are USP Class VI compliant and listed in the federal register, NSF-51 and NSF-61, which allows the resins to be used in food contact and potable water applications. The outstanding chemical resistance of Kynar® resins allows a broad range of applications, including: potable water, high purity, and wastewater treatment. Medical applications include blood and protein filtration. Chemical filtration applications include food and beverage, biopharmaceutical, dairy, and paint.

**KYNAR® PVDF HIGHLIGHTS**

- **50+ year track record** in PVDF production
- **Outstanding Chemical Resistance** i.e. ozone, chlorine, bromine, hydrogen peroxide, chlorine dioxide, acids
  - Homopolymer pH=1–12
  - Copolymers pH=1–13
- Grades available in a **wide viscosity range** for both flat sheet and hollow fiber membranes including both TIPS and NIPS processes
- Grades that produce highly durable **anti-fouling** membranes
- Select Kynar® PVDF grades used in membrane production are **USP Class VI, NSF-51, and NSF-61** compliant
- Grades available for **nanofiber** production and nanofiber membranes
- Technical support teams have the ability to prototype hollow fiber, reinforced hollow fiber, and flat sheet membranes
- Radiation resistant and can be **sterilized** via conventional methods including gamma, steam, and EtOH

**KYNAR® PVDF MEMBRANE APPLICATIONS**

- Food & Beverage filtration
- Water filtration (MF and UF pore size)
  - i.e. wastewater, viral rejection, ultrapure, deionized, potable water, membrane bio-reactors
- Chemical process filtration (i.e. paint)
- Biomedical blood and protein filtration
- Biopharmaceutical filtration
- Membrane distillation
- Separations i.e. liquid/liquid, liquid/gas, gas/gas
- Porous support for coating of specific separative layer(s) for gas/gas or liquid/gas separation
A range of Kynar® PVDF grades are available to help customers tailor their membranes for specific applications and processing. The Kynar® 700 series is produced in a range of viscosities, permitting customers to select the optimum product for their membrane process. Kynar® MG 15 is a new grade designed specifically for hollow fiber spinning.

Kynar® HSV 900 is a very high viscosity grade especially suitable for hollow fiber casting and other applications requiring high gel strength. Kynar Flex® copolymer grades offer even higher pH chemical resistance and greater flexibility.

Kynar® resins are supplied in several forms: fine powder, granular, and pellets. Powders are often preferred for ease of dissolution, while our new granular, high bulk density, free flowing G150 allows for easier handling and solubility. See table below.

Model formulations
Arkema, a leader in PVDF, is a global company with the resources to better serve our customers. Our experienced R&D staff and full analytical services provide us with the tools to prototype and test hollow fiber, reinforced fiber, and flat sheet membranes. Our team can provide initial formulations and process parameters for various grades of Kynar® PVDF to enable our customer’s development and speed to market.

Kynar® resins have solubility properties suitable for easy processing by a variety of typical membrane forming processes. Table 3 lists active and latent solvents. Generally, Kynar® PVDF is not soluble in aliphatic hydrocarbons, aromatic hydrocarbons, chlorinated solvents, alcohols, acids, halogens, and basic solutions.

See SDS for Health & Safety Considerations. Arkema has implemented a Medical Policy regarding the use of Arkema products in Medical Devices applications that are in contact with the body or circulating bodily fluids: (http://www.arkema.com/en/social-responsibility/responsible-product-management/medical-device-policy/index.html). Arkema has designated Medical grades to be used for such Medical Device applications. Products that have not been designated as Medical grades are not authorized by Arkema for use in Medical Device applications that are in contact with the body or circulating bodily fluids. In addition, Arkema strictly prohibits the use of any Arkema products in Medical Device applications that are implanted in the body or in contact with bodily fluids or tissues for greater than 30 days. Arkema trademarks and the Arkema name shall not be used in conjunction with customers’ medical devices, including without limitation, permanent or temporary implantable devices, and customers shall not represent to anyone else, that Arkema allows, endorses or permits the use of Arkema products in such medical devices. It is the sole responsibility of the manufacturer of the medical device to determine the suitability (including biocompatibility) of all raw materials, products and components, including any medical grade Arkema products, in order to ensure that the end-use product is safe for its end use, performs or functions as intended, and complies with all applicable legal and regulatory requirements (FDA or other national drug agencies). It is the sole responsibility of the manufacturer of the medical device to conduct all necessary tests and inspections and to evaluate the medical device under actual end-use requirements and to adequately advise and warn purchasers, users, and/or learned intermediaries (such as physicians) of pertinent risks and fulfill any postmarket surveillance obligations. Any decision regarding the appropriateness of a particular Arkema material in a particular medical device should be based on the judgment of the manufacturer, seller, the competent authority, and the treating physician.
